PROFILE

Frontend developer with a unique professional journey. I began my career in analytical roles, accumulating over 3 years of corporate experience. Seeking a change, I transitioned into the IT industry by completing a 9-month web development bootcamp, where I gained a strong foundation in the MERN (MongoDB, Express, React, Node.js) stack.

In my current role, I specialize in React, TypeScript, JavaScript, HTML and CSS, crafting engaging user interfaces and web experiences that meet today's industry standards.

EXPERIENCE

MARCH 2023 - PRESENT

Gecko Dynamics • Kraków, Poland
Frontend Developer

React, TypeScript, JavaScript, HTML, CSS

- Built a comprehensive developer-hire-price-comparing tool with React to engage clients in interaction by letting them build a team, estimate the cost of their project across different countries or place orders straight away. The challenge was organizing the initial data and adapting it to changing output requirements during implementation. Used TypeScript to keep track of these changes.
- Created a landing page for an external client as their first promotional product. It included a number of embedded videos, heavy images, complex CSS interactions and an email-collecting API integration. As a result, it required extra thought into optimizing loading times and keeping the cross-browser compatibility.
- Implemented a template for a group of offer-presenting subpages on the main internal website to unify the appearance and make it consistent for visitors. Used React with TypeScript to handle the customization part.
- Added breadcrumbs, adjusted metatags and optimized content per marketing team's guidance to improve SEO rankings of internal websites.
- Updated HTML email templates for existing clients to supplement new functionalities that their systems offer e.g. quote receipt confirmation or call invitation.

MAY 2022 - FEB 2023

IBM • Kraków, Poland
